STUDY TIPS

Use Your Vocabulary Lists
- Photocopy the vocabulary list for each chapter in your textbook and add any terms suggested by your instructor. This creates a study aid that is easy to carry with you for additional review whenever you have a free minute.
- Review the terms on each list. When you have mastered a term, put a check in the box next to it. If you cannot spell and define a term, highlight it for further study.
- Look up the meanings of the highlighted terms in the textbook and work on mastering them.
- When using a list isn’t convenient, consider listening to the Audio CDs that accompany this text.
- Caution: Do not limit your studying to these lists. Although they contain important terms, there are many additional important words in each chapter that you need to know.

Use Your Flash Cards
- Use the flash cards from the back of this book.
- As you go through them, remove from the stack all those word parts you can define.
- Keep working until you have mastered all of these word parts.

Make Your Own Study List
- By now you should have greatly reduced the number of terms still to be mastered. Make a list of these terms and word parts, and concentrate on them.

Review Your Learning Exercises
As your corrected Learning Exercises are returned, save them. As review time go through these sheets and note where you made mistakes. Ask yourself, “Do I know the correct answer now?” If it is not correct, add the term or word part to your study list.

Help Someone Else
One of the greatest ways to really learn something is to teach it! If a classmate is having trouble, tutoring that person will help both of you learn the material.

Use the Practice Sessions
The next two pages are answer sheets to be used with the “Review Session” and “Simulated Medical Terminology Final Test” that follow. The answer keys for self-grading of these tests are at the end of respective Sections.

Which term is used to describe a word formed from the initial letters of the major parts of a compound term? acronym.

2. Which skin condition is characterized by isolated pustules that become crusted and rupture? Impetigo.

3. Which procedure is the surgical removal of all or part of the colon? Medical terminology is by necessity complex. Understanding the jargon of medicine takes extensive years of education and enculturation. Orthopaedic terminology is perhaps the most difficult of all because of the breadth of disease and injury that affects the musculoskeletal system. Terms related to anatomy, physiology, genetic injury descriptors, and syndromes require an intimate knowledge of the broad field of orthopaedics. Although medical terminology usually impedes communication with patients and families, PN may be an exception. Use the phrases artificial nutrition or nutrition by vein instead of eating or feeding to emphasize that PN is a medical intervention that is qualitatively different from the familiar act of eating.
