The second edition of this book has once again brought together the nation's leading experts on all aspects of ovarian cancer, to produce a comprehensive yet readable and clinically relevant work on the subject. The book retains its organization into sections on the basic science, histopathology, and clinical aspects of ovarian cancer. Ovarian cancer is the leading cause of death in women with gynecologic malignancies. Although it accounts for only about 27 percent of new gynecologic cancer cases each year in Western countries, this deadly disease kills more women than all other gynecologic malignancies combined. Ovarian Cancer Second Edition. For further volumes: http://www.springer.com/series/5808.

Preface. Ovarian Cancer. Publication Year: 2001. Edition: 2nd Ed. Authors/Editor: Stephen C. Rubin, MD; Gregory P. Sutton, MD. Publisher: Lippincott Williams & Wilkins (LWW). A timely, authoritative and comprehensive Second Edition is a clinical and scientific update on ovarian cancer. New screening approaches are presented and new methods of diagnosis, treatment and new drugs. Primary chemotherapy, second-line chemotherapy and primary surgery are examined. This second edition includes exciting new advances in ovarian cancer detection and treatment and provides an analysis of current research into aspects of malignant transformation, growth control, and metastasis. A more detailed understanding of these processes may ultimately translate into the development of novel approaches for the detection and control of ovarian cancer. "Ovarian Cancer prevention, detection and treatment remain a significant health care challenge. In this text thought leaders in the field address the critical biologic and clinical issues relevant to the disease." Ovarian Cancer. Book Subtitle. Second Edition. Editors. M. Sharon Stack.
